

truBody®

REDUCE FAT.
TONE MUSCLE.

Model. Not actual patient.

“Customization is one of the biggest stand-out features of truBody compared to any other body sculpting devices on the market,” said Arash Moradzadeh, MD of AM Facial Plastics. “truBody offers complete customization to your patients’ goals as well as their body shape and size. No two patients are alike and to have that extreme customization is a very big deal and a major standout.”

According to Dr. Moradzadeh, the different modes of truFlex allow him to give his patients exactly what they need and provides them with very useful long-term results. “truFlex allows physicians to treat multiple areas at once with a variety of modes that can mimic different exercise protocols,” he explained. He added that truSculpt provides unparalleled versatility with 6 paddles that can be placed in various orientations to suit the patient’s specific body shape and size.

Whether patients are looking for a catalyst to motivate them into a healthier lifestyle or desire improved core strength, pairing truSculpt with truFlex allows physicians to treat a wide spectrum of patients. As Dr. Kaga succinctly summarized, “The combination of reducing fat and strengthening muscle with truBody means we have a total body solution that revolutionizes the world of body contouring.”

Unparalleled Customization for Body Shaping Results With truBody® by Cutera®

MIRA KAGA, MD
The Kaga Institute
Marlboro, NJ

Finally, a bold approach to body sculpting is here with truBody by Cutera (Brisbane, CA). truBody helps patients reach their full potential by pairing truSculpt®, which can provide an average of 24% body fat reduction¹ in a single treatment, with truFlex™ that sculpts muscles with a 15- to 45-minute treatment, resulting in up to 30% muscle mass² over 4-6 treatments. More paddles and smart placements give physicians the confidence to customize treatments and provide superior results in less time than any other device on the market.

Mira Kaga, MD, owner of The Kaga Institute uses truBody’s trim and tone protocol as a multidimensional approach to body contouring in her practice. She reported truSculpt works on reducing fat, while truFlex uses multi-directional stimulation to sculpt and tone the muscle to give patients more definition. “truBody allows us to work from many different angles and personalize each treatment for individuals,” she shared.

AVERAGE

24% fat reduction per treatment area¹

UP TO

30% increase in muscle mass²

TRUSCULPT/TRUFLEX:

Please review the operator’s manual and treatment guidelines for the contraindications, precautions, warnings, side effects and possible adverse events associated with the truSculpt/truFlex treatment. Results and experience may vary.
